

Mukuru Moses; mukurumose@hotmail.co.uk +256 772 878501

Moses is a Makerere University School of public health/CDC M&E fellow alumni. He has submitted a thesis to Makerere University for an award of a Master of Arts in Social Sector Planning and management. He holds a post graduate diploma in Project Planning and Management and a degree in Social sciences from Makerere University.

Moses has 9 years of experience in project management and M&E which stretches back from community level as a mobiliser to the current position as M&E/ Program manager at Uganda National Health Users'/Consumers' Organisation (UNHCO).

I have worked with child development, education and health related programs with specific focus on program design, resource mobilization, implementation, monitoring and evaluation. In all these programs social accountability, advocacy and rights based have been core approaches. I have previously mentored the Project; *Promoting Environmental Conservation Amongst Out of School Youth in the Oil Rich Albertine region funded by the Open Society Foundation in Uganda.*

I'm skilled in participatory monitoring and evaluation of programs. I have worked with both NGOs and local governments in my career. I have worked with direct implementing and sub granting agencies. In such settings, I have successfully designed and managed integrated M&E systems for programs at national level. I'm currently monitoring social accountability programs and I support implementers to strengthen capacity to establish monitoring tools and track results of their social accountability work.

I have hands on experience with the Community Score card, The Citizens' Report Card, The Qualitative Service Delivery assessment among others and have designed monitoring tools for tracking such tools. I'm one of the consultants currently supporting Concern World Wide in Uganda to roll out the Community Score Card in Karamoja. This will involve adapting the score card, training their staff to apply it, providing guiding materials and a monitoring tool.

I can apply M&E and participatory processes without difficulty in any setting. I blend design, implementation and capacity building skills.

.
